

## Summary

Senior back-end developer with +8 years of experience in server-side development, database management, and API integration.

---

## Experience

### Software Engineer

[Snapp Food](#) Dec 2024 - Present

- ✓ Developed old Symfony application with the collaboration of over 90 other software engineers
- ✓ Develop support service with Laravel with high code quality checks and automated tests
- ✓ Challenging with concurrent requests for over 40 million Snapp users

### Software Engineer

[Alopeyk](#) Sep 2023 - Dec 2024 (1 year 4 months)

- ✓ Develop a new microservice that listens to order changes and rewards couriers based on dynamic conditions
- ✓ Upgrade the whole project from Laravel 5.2 to 11
- ✓ Refactor old projects to apply coding standards
- ✓ Refactor the old Woocommerce plugin to be used with new Woocommerce and WordPress versions
- ✓ Create a project with docker-compose to deploy all infrastructure requirements in the local machine

### Software Engineer

[Snapp Market](#) Jan 2022 - Sep 2023 (1 year 10 months)

- ✓ Develop new services and refactor over 20 micro-services using Symfony and Laravel
- ✓ Challenging with too many concurrent requests for over 40 million Snapp users
- ✓ We use Kubernetes, Docker, Elasticsearch, Kafka, and Redis to be on the edge of the technology

### Full-stack Developer

[Darkob](#) Jan 2021 - Dec 2021 (1 year)

- ✓ Refactor the whole project and remove the legacy codes to have a maintainable and fast application
- ✓ Update the project to Laravel 8 and Bootstrap 5 with all package dependencies
- ✓ Fix the CI/CD pipeline and re-configure the server to decrease by 80% of deployment time

### Full-stack developer

[Yekonoh](#) Jul 2020 - Present - Personal project

- ✓ Programmed the whole website from scratch using Laravel and Bootstrap in 5 months
- ✓ Using Elasticsearch as a search engine to implement a fast and customized search
- ✓ Implement the PWA version for mobile users for a better experience
- ✓ This website is completely optimized and has a +95 score on Gtmetrix

### Back-end Developer

[Malltina](#) Nov 2018 - Jul 2020 (1 year 9 months)

- ✓ Develop new APIs and also refactor the old ones in different services
- ✓ Refactored and re-design more than 50 pages in the admin panel
- ✓ We used Laravel, Lumen, Mysql, MongoDB, and Redis to sell over 2 million products.

### Website designer - System Admin - SEO

[Iran Hardware Center](#) Apr 2018 - Nov 2018 (8 months)

- ✓ Manage and monitor two servers using Virtualmin.
- ✓ Re-design and customize over 130 WordPress websites.
- ✓ Change the template and plugins and use a central path to customize efficiently for all 130 websites

## Website designer - System Admin - SEO

[TekData](#) Aug 2016 - Apr 2018 (1 year 9 months)

- ✓ Configure the server using Virtualmin to manage three websites within GUI.
- ✓ Designed Donamall online shop using WordPress and Woocommerce with +500 products.
- ✓ Design the Tekdata website using WordPress to present the company activities in two languages.

---

## Volunteering

### Back-end Developer
